SPECIAL FEARES

**Optional Radio Remote Control *Only with CE or Radio Remote*

SDD
Soft Descend Drive
The SDD system is designed to reduce the oscillations and ensure a perfect control of the motions.

SGS
Sprint Generation System
The purpose of SGS system is to increase the extensions speed without affecting the crane safety.

RRS
Radio Remote Control
The operator can control the crane with high precision proportional levers in every position, and in doing so, can supervise the loading and unloading operations. That means a time savings and greater safety. The operator can also control the truck engine start, stop and acclerator with the remote control. All of the remote controls used by AMCO VEBA have an identification code and are shielded from electro-magnetic fields and from external radio signals.

EBB
Electronic Black Box
Amco Veba has designed this control motherboard to ensure an effective and reliable control of the crane in every working condition. The operator can read on the display all the information about the state of the crane, of the accessories, and of the routine maintenance. All components are designed according to automotive industry standards and ensure the highest reliability.
